ILLUSTRATIONS APPEARING IN Nos. 1-6 of Vol. LXXXIII

Facing page

The Tobacco Stem-borer (*Phthorimaea heliopa* Lw.) (Coloured Plate) - 64

Coelogyne asperata Lindl. (Orchid) - 87

The Mango Leaf-cutting Weevil (*Deporaus marginatus* Pasc.) (Coloured Plate) - 129

The Mango Flea-Weevil (*Rhynchaenus mangiferae* Mshl.) (Coloured Plate) - 133

The Citrus Leaf-miner (*Phyllocnistis citrella* Stt.) (Coloured Plate) - 188

The Citrus Leaf-roller ((*Psorosticha zizyphi* Stt.) (Coloured Plate) - 191

Facing page

Plate 1. Two years old bushes of different varieties, grown from three seeds planted in one hole:
A. A poor variety with small leaves.
B. A good variety with large leaves. - 200

Plate 2. A hybrid with desirable characters of the Southern varieties but not frost-resistant (a character of importance in Northern tea regions). Every winter its branches fall off due to frost and every spring it produces new shoots. Back of Plate 1

Plate 3. Two forms of frost-resistant hybrids:
A. A productive form of high quality.
B. An unproductive form of low quality. Plate 2

INDEX

Facing page

Plate 4. Shoots of the same age:
A. A productive form.
B. An unproductive form. - 201

Plate 5. Simple mound layering. - 202

Plate 6. Simple layering. Rooted layers at the moment of their separation from the parent plant. In the background the parent plant with shoots laid for propagation Back of Plate 5

Plate 7. Simple layering. A rooted shoot, separated from its parent plant and ready for transplantation.
a. Young roots, which developed along the underground part of the shoot Plate 6

Plate 8. Mound layering with ringing. A rooted shoot separated from the parent plant and ready for transplantation.
a. Young roots concentrate at the base of the shoot above the wired place - 203

Plate 9. Continuous layer. Young shoots, produced by a single layer - 204

Plate 10. Chinese layering:
A. A rooted shoot.
B. Bamboo tubes into which the shoot is placed before being covered with earth - 206

Plate 11. Common layering, carried out in order to fill up the gaps in a tea row and to obtain a continuous espalier - 207

Plate 12. A two years old plant: the shoot was laid in 1931, separated from the parent plant and transplanted in June 1932, photographed in August, 1933. (Poor soil: a Ricinus planted for shade developed but poorly). - 208

Plate 13. The root system of a two years old tea bush, grown out of a bow-shaped layer, separated from its parent plant and transplanted in May 1932, dug out and photographed in May, 1934.
x. Roots, first produced by the layer.
xx. Roots, produced above the former after the shoot had been separated from the parent plant and transplanted into a deeper hole Back of Plate 12

Plate 14. The root system of a two years old bush, grown out of a wired layer separated from the mother plant and transplanted in May, 1932. Dug out and photographed in May, 1934. It had possessed a well-developed root system, but fine deep-reaching roots were broken in digging. x. Plate 13

Plate 15. A straight shoot with numerous roots at its base. This type of root system is obtained by means of ringing, wiring or twisting the shoot. - 209

Plate I. Ginger Peeling Knife - 214

Plate II. The Peeling and Washing of Ginger Back of Plate 1

Plate III. The drying of Ginger on Bamboo Barbecues - 215

Plate 16. A root cutting, which produced roots and shoots in field condtions during two summer months (June-July) - 261

Plate 17. A rooted plucking shoot with three leaves - 262

Plate 18. A rooted green cutting with four eyes and entire leaves Back of Plate 17

Plate 19. A rooted brown (ripened) cutting with four eyes and entire leaves Plate 18

Plate 20. Rooted brown (ripened) single eye cuttings with leaves, half natural size
Plate 21. Rooted brown (ripened) tea buds
} Back of Plate 19

Plate 22. Tea cuttings with callus, but without roots Plates 20, 21

Plate 23. One year old tea bush, grown out of stem cuttings - 263

Plate 24. Rooted cuttings 4 months old. These cuttings with primary roots were planted in the open ground on June 25, 1932 and dug out and washed on October 30, 1932 when this photograph was taken. The dotted line indicates the top of the cutting, above it is new growth. - 264

Plate 25. The root system of a two years old tea bush, grown out of one year old ripened cutting with three eyes.
x. The points at which the deep reaching roots have been broken Back of Plate 24

Plate 26. Tea plants of the same age.
(a) Grown out of seeds.
(b) Grown out of buds.
x. The point where the taproot was broken in digging. Plate 25
